

Here's four computer models

You will also need anti-virus protection on all of the computers. The initial cost is \$49 per person for the first, \$79 each year afterwards

I would also suggest one of the Microsoft Office products (Word, Excel, PowerPoint). You can get either

- Microsoft Office (Home version): Word, Excel, PowerPoint (One time cost \$149)
- Microsoft 365 Personal (Word, Excel, PowerPoint, Outlook, 1TB Offline Storage for backups) (\$69/year)

I would recommend the Microsoft 365 Personal version as you'll be able to backup your files offline (in case your computer's hard drive fails as a backup)

The first two computers listed here DO NOT have a DVD Drive. I would recommend having one and you'll have to add up to an additional \$69.

The Computer monitors are a separate purchase and there's a basic monitor that can be included with each of these computers and that cost is \$159 for a 27" computer monitor.

So, each computer will need an additional cost of \$118 (Microsoft Office & Anti-Virus software) and a computer monitor (\$159) for a total of \$277.

The first two computers will need an additional \$69 for the DVD drive.

As far as printers go, it all depends on what he's looking for. I'd say the most expensive printer would probably be \$250.00 but it's going to depend on exactly what he's looking for (Laser vs. Desktop, Color, B&W, speed of printing, etc)

Model	PowerSpec B731	PowerSpec B744	Dell Precision 3630 MT	Dell Precision 3431 SFF
Hard Drive	500G (SSD)	1TB (SSD)	1TB	1TB
RAM	16G	16G	8G	8G
